Interclub Bell Target Match: Bagworth 2nd Leg

On Tuesday 2nd July, Bagworth hosted the return match against Redhill, To remind you all, Redhill were had a 23 point lead from the 1st leg.

The Format was 4 rounds of 6 shots, all counting towards the score. The night started of well & there was really nothing between either side after round 1 - Bagworth taking the lead by 1 point.

Round 2 finished and we suddenly found ourselves 12 points down overall

Round 3 was another close round, Bagworth nipped us by 3 points, meaning going into the break for supper, we found ourselves 15points down, so we really had to step up and hit them bells in the last round so the pressure was on.

4th and final round.. again it was a fairly close one, but again another round to Bagworth, this time by 4 points with help from Maurice getting a full house (30 points – 6 bells) well done Mo Overall then when all scores were verified and totalled, Bagworth had beaten us quite considerably by 19 points.

However, I refer you to the 1st sentence, ref our points lead going into the match, so overall across both legs the final results have it as “Redhill Revolvers” winning by 4 points

2019 Summer League Results:

Monday 19th August was the last shoot for the summer league, its been close yet again and without further a due.....

Rifle Bell

- 1st – Mitchell Beattie
- 2nd – Maurice Burnand
- 3rd – Pat Maloney

Pistol Biathlon

- 1st – Paul Clarke
- 2nd – Maurice Burnand
- 3rd – Pete Chesterton

CONGRATULATIONS
to our
WINNERS!

2019 Annual Rifle Competition:

Ladies & Gentleman, My name is Paul Clarke and I am the advocate for the reigning, defending, undisputed, undefeated champion of the last 4 years... Mitchell Beattie... ahem, that's quite enough of that I think ... This year's shoot was held on Monday 16th September and as usual was 4 rounds of paper target, with the highest score winning and obviously a lot of people were hoping to grab that top spot and put and end to the winning streak. However it wasn't meant to be and after all 4 rounds, there was a clear winner. Two people tied for 2nd spot and as we didn't do a shoot off on the night as we wanted to verify scorecards again later, we used countback on the highest individual round to determine 2nd/3rd places. Final Results Below:

- 1st – Mitchell Beattie – 192
- 2nd – Doug Bunney – 186 (highest individual 49)
- 3rd – Pat Maloney – 186 (highest individual 48)

Scoped HFT Possibility – Recently I sent out an email to gather an idea on numbers for a Scoped HFT shoot(s) at Lakeside. That's for all the replies so far, it does seem to be popular so far, so watch this space for updates in the coming weeks whilst we try and work out the details

Target Shooting Show:

On November 16th & 17th 2019, Redhill will have a stand at the Target Shooting show at the NAEC Stoneleigh Park, Coventry to promote both the club and air gunning as a sport.

THE TARGET SHOOTING SHOW 2019
16-17th November 2019

Redhill Revolvers Field Pistol Club

Issue No 23 - (Q3) July 2019 – September 2019

We have decided to add a little feature to the newsletter where we review a pistol with a small introduction and scoring for appearance, balance, weight, power, accuracy and cost.

The second pistol to review is the Webley Nemesis (co2 version)

The Webley Nemesis was the first single stroke pneumatic produced by the company and went into production on the 15th November 1994 with a retail price of £69.95. It came in a black finish and for an extra £5 could be bought with a silver lustre finish. The Nemesis was a little down on power compared to its spring predecessors but boasted much greater accuracy and maintaining the traditional superb build quality. Today you can purchase a good second hand pistol for what it cost new back in 1994, with a mint boxed version being worth just over £100 mark.

In 2018 Webley reintroduced the Nemesis but in another format - CO2 powered, a shock to the Webley enthusiasts who like myself were a little sceptical at first. It runs on a single 12grm CO2 cylinder loaded into the front of the pistol below the barrel using a neat little spanner/key which is stored in the pistol grip enclosing a double magazine set further into the grip. Clever engineering and a good use of space. The sights are fibre optic and are adjustable for elevation and windage simply give the foresight a light tap left to right for a little more extra tuning. The safety is manually operated and the triggers factory setting is spot on for pull and pressure.

Expect to get around 40 shots per CO2 cylinder obviously variable depending on weather conditions and surprisingly, the Nemesis is extremely accurate. You also have the option of a multi shot mag or single shot tray, so the designers have covered all eventualities.

To conclude the Nemesis is not a revamp of the old model but a totally new concept and one that works at a very affordable price RRP £129.99.

Weight.....875grms

Power.....420ft/sec
